DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1-16, 18 and 19 are rejected under 35 U.S.C. 102(b) as being anticipated by Hayakawa (4,025,777).

3. Hayakawa discloses the structural limitations of the lighting method of claims 1-11 (figs 1-8 and summary of invention)

4. Hayakawa discloses a plurality of movable light supports (fig 5, ref num 9-12); a light beam producing light mounted on each one of said supports (L); a track traversable by said supports and said lights (11) a power supply couplable to each one of said lights to energize said respective lights (inherent); a drive mechanism for driving said supports and said lights along said track (cols. 1-2, lines 61-67 and 1-2 respectively, col.3 lines 55-59);

- The lights are further mounted on said respective supports for controllable movement of said lights with respect to said respective supports (fig 7);

- The drive mechanism further comprises a drive motor on each one of said supports (41,58,55);
- The motors are variable speed motors; the drive motors are variable speed and reversible motors;
- A controller coupled to said power supply and to said drive mechanism for controllably moving said supports and said lights along said track and for controllably actuating said lights to produce said light beams (inherently a controller must be controlling the movement of the drive mechanism from an exterior location for the movement of the lights to be initiated).

Claim Rejections - 35 USC § 103

5. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

6. Claim 17 is rejected under 35 U.S.C. 103(a) as being unpatentable over Hayakawa.

7. With regards to the lighting apparatus further comprising a controllable brake mounted on each one of said respective supports, the transmission shafts as shown in figures 6-8 although not reciting a "controllable brake" as such, do slow down the respective supports when so desired. It would have been obvious to one of ordinary skill in the art at the time the invention was made to have a controllable brake, since the examiner takes official notice of the equivalence of a motorized gear box and a

controllable brake for their use in the illumination art with regards to movable lighting fixtures and the selection of any of these known equivalents to slow down or halt the movement of a motorized fixture would be within the level of ordinary skill in the art.
